

STUD SHEEP PELLETS

Grain-based pellets for the energy, protein and mineral supplementation of confined sheep, especially stud stock being prepared for show and sale. They are formulated to be fed in conjunction with the consumption of fibre forage such as mature pasture, cereal hay or straw.

FEATURES: These pellets contain protein and energy at levels to aid the body and wool development of mature sheep. Buffers such as Acid Buf and Bentonite are added, along with Ammonium Chloride to assist with urinary calculi issues when feeding of confined livestock. The product is formulated to be palatable, with the inclusion of Lucerne meal, and includes a specific sheep mineral and vitamin premix to ensure trace elements are provided.

INGREDIENTS: Barley, Corn, Wheat grains and Wheat co-products, Oilseed Protein meals, Lucerne Meal, Lime, Ammonium Chloride, Salt, Buffer, Trace minerals and vitamins premix.

NUTRIENT SPECIFICATIONS (Dry Matter basis):	
Protein	15%
Energy (Ruminant ME)	12 Mj/kg
Crude Fibre	9.5%
NDF	30%
Starch	35%
Calcium	1.5%
Phosphorus	0.5%

SPECIAL INCLUSIONS, MEDICATIONS: Nil
 This product does not contain ionophores or urea.
 This product does not contain restricted animal material.

HOW TO FEED: These grain-based, low fibre Sheep pellets are designed to boost the diet of sheep at a feeding rate of up to 2.0% of bodyweight per day, fed out in troughs or self-feeders in a confined shed situation. They must be fed in conjunction with fibre forages, such as cereal hay or straw, at all times, and slides on self-feeders should be adjusted to regulate intake.

To avoid problems with acidosis (grain poisoning), controlled and gradual introduction of the pellets is important, and continual access by the animals to a fibre source is critical for proper rumen function. Animals require an introduction period to adapt and condition their gut to the grain-based pellets. Give special attention to controlling the introduction of pellets to excessively hungry or drought-affected stock.

As an introduction, feed small controlled amounts (about 0.2% of bodyweight per animal per day to begin with) and slowly increase the daily amount over 10 days up to the normal feed rate for sheep of 2.0% of bodyweight per head per day, with fibre always available to make up the balance of the total diet intake.

Ensure that clean fresh water is available at all times.

OTHER INFORMATION: Products are available in Bulk, Bulka Bags and 20kg bags
